FIG. 8 is a cross-sectional view of the device 100 in a second position, where the device 100 is inserted into the bone 20. The device 100 is shown in a second position, where the device 100 is inserted into the bone 20. The device 100 is shown in a second position, where the device 100 is inserted into the bone 20.

FIG. 15 is a perspective view of the femoral component of the prosthesis, showing the proximal end with the head and neck, and the distal end with the stem. The head is labeled 10, the neck is labeled 14, the proximal end of the stem is labeled 16, the distal end of the stem is labeled 18, the proximal end of the neck is labeled 20, the distal end of the neck is labeled 22, the proximal end of the head is labeled 28, and the distal end of the head is labeled 30. The head is shown in a cross-sectional view, revealing internal features such as a central bore and a peripheral flange. The neck is shown in a cross-sectional view, revealing a central bore and a peripheral flange. The stem is shown in a cross-sectional view, revealing a central bore and a peripheral flange. The proximal end of the stem is labeled 16, the distal end of the stem is labeled 18, the proximal end of the neck is labeled 20, and the distal end of the neck is labeled 22.
